About the Department:

The Department of Computer Applications was established in the year 2017 with the objective of imparting quality education in the field of Computer Applications. With rapidly evolving technology and the continuous need for innovation, the department has always produced quality Professionals. The aim of this department is to develop core competence in Computer Science and prepare the students to carry out development work, as well as take up challenges in research. The department has very good faculty strength, who are all active learners and whose knowledge, insights and perspectives gained are transformed to keep their students fresh, topical, and timely. The driving mission for the department is to advance the frontiers of research in computer science and automation and offer world-class pedagogical and research experience to its students.

DEPARTMENT ACTIVITIES

Best Practice

Objective of the Practice

- Many students do not understand unfamiliar or abstract code.
- Use game or demonstrations to introduce coding concepts
- Students need to understand the logic behind the concept and the need for the concept before they see the code.

Context

- Students come into our course with a broad range of backgrounds, educational experiences, and prior knowledge and skills.
- Current research on learning suggests that learning is determined by what the learner already knows about the topic or related topics

The Practice

- Conditionals: Simon Says
- Loops: Do the "wave" around the room until a condition is met
- Arrays: egg cartons or pill boxes with manipulatives
- Random: rolling dice or spinning a wheel
- String methods: play scrabble

Evidence of success

- Show good quality code and have the students predict the output. You are modelling high quality code.

- Take good quality code and remove a few lines. Students need to fill in the code to create the expected outcome. This can be used in large group settings, small groups, partners or individually

- Give students code that contains errors. Students must go through the debugging process to fix the code.

- Finally, give students a problem and they write the code to solve it. Problem >

  Analysis (what is problem asking you to do, what are you given & what do you need) > Pseudocode > Code

Problems encounter and resource required

1. Balancing resources across multiple projects

2. Lack of resource visibility

3. Setting unrealistic deadlines

4. Communication issues leading to resource problems

5. Poor time-tracking
